

GOWTHAM SAI KADALI

Associate DevOps Engineer | Cloud Infrastructure & Automation

Hyderabad, India | +91-9966282514 | gowthamkadali2510@gmail.com | linkedin.com/in/gowthamsaikadali | github.com/gowthamsaikadali

PROFESSIONAL SUMMARY

B.Tech Electronics & Communication Engineering graduate (2025) with hands-on, project-driven experience in DevOps fundamentals, CI/CD pipeline design, and cloud platform engineering across AWS and Microsoft Azure. Skilled in Linux administration, automation and scripting, Infrastructure as Code (Terraform), containerization (Docker, Kubernetes/AKS), and DevSecOps practices using SonarQube and Trivy. Built and documented multiple end-to-end cloud deployments independently, demonstrating strong problem-solving ability, attention to detail, and readiness to contribute immediately as an Associate DevOps Engineer.

CORE SKILLS

DevOps Fundamentals & CI/CD Pipelines: Azure DevOps, GitHub Actions, Jenkins

Cloud Platforms: Microsoft Azure, Amazon Web Services

Operating systems: Linux, Windows Server

IAC Tools: Terraform

Containerization & Orchestration: Docker, Kubernetes

Monitoring & Observability: Prometheus, Grafana, Azure Monitor, Amazon CloudWatch

Security & Quality (DevSecOps): SonarQube static code analysis, Trivy vulnerability scanning, automated security gates

Version Control: Git, GitHub

PROJECTS

Automobile Manufacturing App — CI/CD Pipeline with Terraform & AWS

Flask · AWS (EC2, RDS, ALB, VPC, IAM, S3, DynamoDB) · Terraform · GitHub Actions

- Designed and deployed a 2-tier AWS architecture (ALB → EC2 + RDS MySQL) with a custom VPC across public and private subnets to enforce network isolation, hosting a Flask/Gunicorn application.
- Configured Application Load Balancer health checks and tier-specific security groups (ALB, EC2, RDS) following least-privilege access principles.
- Authored a 6-module Terraform codebase (network, security, IAM, database, ALB, compute) with S3 remote state and DynamoDB state locking for safe, repeatable infrastructure automation.
- Built a 6-stage GitHub Actions CI/CD pipeline (build → pytest coverage → Terraform plan → manual approval gate → Terraform apply → SSH deploy with health check), with all secrets managed via GitHub encrypted secrets.

DevSecOps CI/CD Pipeline on Azure

Azure DevOps · Docker · AKS · Terraform · SonarQube · Trivy

- Architected a complete DevSecOps CI/CD pipeline using Azure DevOps with a self-hosted agent for a Java-based application.
- Integrated SonarQube for static code analysis and Trivy for container vulnerability scanning, enforcing automated security gates before deployment.

- Provisioned AKS and Azure Container Registry (ACR) using Terraform for version-controlled, repeatable infrastructure.
- Configured Prometheus and Grafana dashboards for real-time application performance and cluster health monitoring.

Additional Projects

- **3-Tier Application Deployment** (Docker, Azure Linux/Windows VMs, MySQL): Containerized a Flask 3-tier app with Docker Compose and deployed it on Azure VMs secured with VNets/NSGs; benchmarked container- vs. VM-based deployment for scalability and performance.
- **Hub-and-Spoke Network Architecture on Azure** (Azure Firewall, VNet Peering, UDRs): Designed a Hub-and-Spoke topology with centralized Azure Firewall and UDR-based routing, validating zero unintended traffic exposure across peered VNets.
- **Terraform Portfolio Website Deployment** (Terraform, Azure VM, Nginx, Blob Storage): Provisioned full Azure infrastructure via Terraform with a remote backend, deploying Nginx for static hosting and Blob Storage for image assets.

EDUCATION

Bachelor of Technology (B.Tech) — Electronics and Communication Engineering Ramachandra College of Engineering, Eluru | Graduated: 2025

ADDITIONAL INFORMATION

Languages: English, Telugu, Hindi

Core Competencies: Problem Solving, Team Collaboration, Continuous Learning, Attention to Detail
